

## EAR, NOSE, & THROAT

---

Imagine not being able to listen to beautiful classical music. Imagine not being able to smell or taste a favourite family meal. Imagine suffering sleepless nights because your loved one snores.

There are certain basic experiences of life that make living meaningful and wonderful. When our sense of hearing, taste, and breathing deteriorate or no longer work as well as they should, our enjoyment and quality of life are also diminished.

**Hearing and balance, swallowing and speech, breathing and sleeping, allergies and sinuses, cancer and surgeries of the head and neck, and skin disorders are some of the conditions that our ENT (Ear, Nose, and Throat) specialist can examine and treat in both adults and children.**
